

Introducing an Extraordinary Advancement in Meal Replacement Design for Weight Loss or Weight Stabilization

numetra™

WEIGHT MANAGEMENT SYSTEM

Numetra is a “state of the science” product line that was developed as the result of a comprehensive review of recent academic research. The products include synergistic ingredients that help promote optimal metabolism for active weight loss.

- Contains a combination of dairy proteins with differing absorption rates to support a steady amino acid balance and sufficient leucine to maintain optimal protein synthesis.
- Contains controlled carbohydrate levels including soluble dietary fiber and low added sugars to support mild ketosis, satiety, and support protein sparing during a Very Low Calorie Diet (VLCD).
- Numetra includes a combination of long and short chain polyunsaturated fats, medium chain triglycerides (MCT), and essential fatty acids — the combination of which promotes thermogenesis and optimizes the utilization of fat for energy.
- Balanced source of high quality macro and micronutrients to support optimal metabolism with a key focus on preserving metabolic rate.
- Prebiotic fibers and a unique strain of probiotics to support the microbiome and optimize intestinal health.
- **Nutritional Parameters: 160 calories, 20g protein, 12g carb, 3g fiber**

How It Works For You (the Provider):

Robard offers unsurpassed physician and clinical support and program resources that make effective obesity treatment programs easy to launch and sustain over time:

- Comprehensive staff training
- Comprehensive medical protocols and meal plans (without drugs)
- Patient education materials: Behavior, Nutrition, and Exercise
- Great tasting meal replacements – nutritionally designed
- A mobile app and digital solution that helps your staff and patients
